

PROBLEM STATEMENT

KPI REQUIREMENTS

We need to analyze key performance indicators (KPIs) for the pizza sales dataset to gain valuable insights into overall business performance. The following metrics will be calculated:

1. Total Revenue

Calculate the total revenue generated from all pizza orders by summing the total price of every order.

2. Average Order Value (AOV)

Calculate the average amount spent per order by dividing the total revenue by the total number of orders.

Formula:

$$\text{Average Order Value} = \text{Total Revenue} / \text{Total Orders}$$

3. Total Pizzas Sold

Calculate the total number of pizzas sold by summing the quantity of pizzas across all orders.

4. Total Orders

Calculate the total number of customer orders placed during the selected time period.

5. Average Pizzas per Order

Calculate the average number of pizzas purchased in each order by dividing the total pizzas sold by the total number of orders.

Formula:

$$\text{Average Pizzas per Order} = \text{Total Pizzas Sold} / \text{Total Orders}$$

VIZ. REQUIREMENTS

To better understand sales performance and customer purchasing behavior, the following visualizations will be created.

1. Daily Trend for Total Orders

Display the daily trend of total orders over the selected period. This visualization helps identify fluctuations in daily order volume and customer demand.

2. Monthly Trend for Total Orders

Illustrate the monthly trend of total orders. This chart helps identify seasonal patterns and overall business growth throughout the year.

3. Percentage of Sales by Pizza Category

Show the distribution of sales across different pizza categories. This visualization provides insights into the contribution of each category to total sales.

4. Percentage of Sales by Pizza Size

Represent the percentage of sales contributed by each pizza size. This helps analyze customer preferences for different pizza sizes and their impact on revenue.

5. Total Pizzas Sold by Pizza Category

Display the total number of pizzas sold for each pizza category. This visualization allows comparison of sales performance across different categories.

6. Top 5 Best Sellers by Revenue, Total Quantity, and Total Orders

Highlight the top five best-selling pizzas based on:

- Total Revenue
- Total Quantity Sold
- Total Orders

These charts help identify the highest-performing pizza products.

7. Bottom 5 Best Sellers by Revenue, Total Quantity, and Total Orders

Showcase the bottom five worst-performing pizzas based on:

- Total Revenue
- Total Quantity Sold
- Total Orders

These visualizations help identify underperforming products and opportunities for improvement.
